- ▶ Immediately understand exceptions and perform root cause analysis
- ▶ Analyse early-warning indicators for project and portfolio problem area
- ▶ Leverage the power of Oracle Business Intelligence (BI) including mobile support and geospatial visualisation
- ▶ Manage off-line maintenance projects using daily burn downs and performance metrics
- ▶ Includes Oracle's Primavera Data Warehouse
- ▶ Publish project, portfolio and program performance on your enterprise portal

FEATURES & BENEFITS

- ▶ **Industry Best-Practice Analytics** Primavera Analytics is an enterprise-wide business intelligence portal that benefits everyone in your organisation by providing transparency into project portfolio performance and a single source of the truth

With Primavera Analytics you can leverage the power and flexibility of the Oracle Business Intelligence platform to add your own reports, scorecards and KPIs to the solution beyond the pre-configured set of dashboards you receive. You have full control to modify the default dashboards and build your own reports
- ▶ **Root Cause Analysis** With its powerful drill down capabilities Primavera Analytics provides you with the ability to move from high level portfolio view to specific projects to uncover the causes of variations in project schedule or cost performance Once the problem has been identified you can drill directly into Primavera P6 EPPM or Primavera Unifier from the Primavera Analytics dashboard to take corrective action
- ▶ **Transparency** Primavera Analytics will give your entire organisation a single BI solution where published project performance indicators, trends, statistics, graphs and geospatial maps are available through a self-service portal.
- ▶ **Manage By Exception** Quickly identify which projects are performing well and exceeding expectations as well as those negatively affecting your portfolios, budgets, cash flows and resources. By focusing on the problem areas you can direct proper management attention to project that do align to strategic objectives, are over-budget or under-performing.
- ▶ **Flexibility** With the flexibility of the Oracle BI engine you can combine project data from instances of Primavera Unifier and Primavera P6 EPPM with information from your ERP systems, financial data or customer data to create a single view of the truth across the enterprise

This provides an increased level of transparency and visibility into your business processes and project performance that are required to maximise efficiencies and return on investment
- ▶ **Security** Primavera Analytics provides business intelligence built on top of the Primavera Data Warehouse so that you can easily report from dashboards and run ad-hoc queries Primavera P6 EPPP and Primavera Unifier security privileges are utilised throughout the solutions so that non-privileged users do not have visibility into sensitive or confidential information
- ▶ **Performance** Dashboard reports and ad-hoc queries can run against active projects as well as your entire enterprise project history of projects without negatively affecting performance on your live systems. The Oracle BI engine performs offline aggregations and summaries of large complex data sets for fast query responses
- ▶ **Productivity** By using a familiar web-based portal, Primavera P6 Analytics is quick to learn, easy to access and navigate, and requires very little training. Each dashboard report may be printed or saved directly to a number of popular formats including PDF, Microsoft Word®, Microsoft Excel®, Microsoft PowerPoint®, HTML and others.
- ▶ **Actionable BI** You can focus on and directly improve your project performance with early-warning indicators, trending and forecasting. Primavera P6 Analytics alerts you about problem areas in your projects and allows you to take corrective action to keep your projects on track.
- ▶ **Report with ease** Easily download any report to any format to use in your project status or portfolio review meetings
