Oracle's Primavera P6 Analytics

Milestone
Project Management Solutions

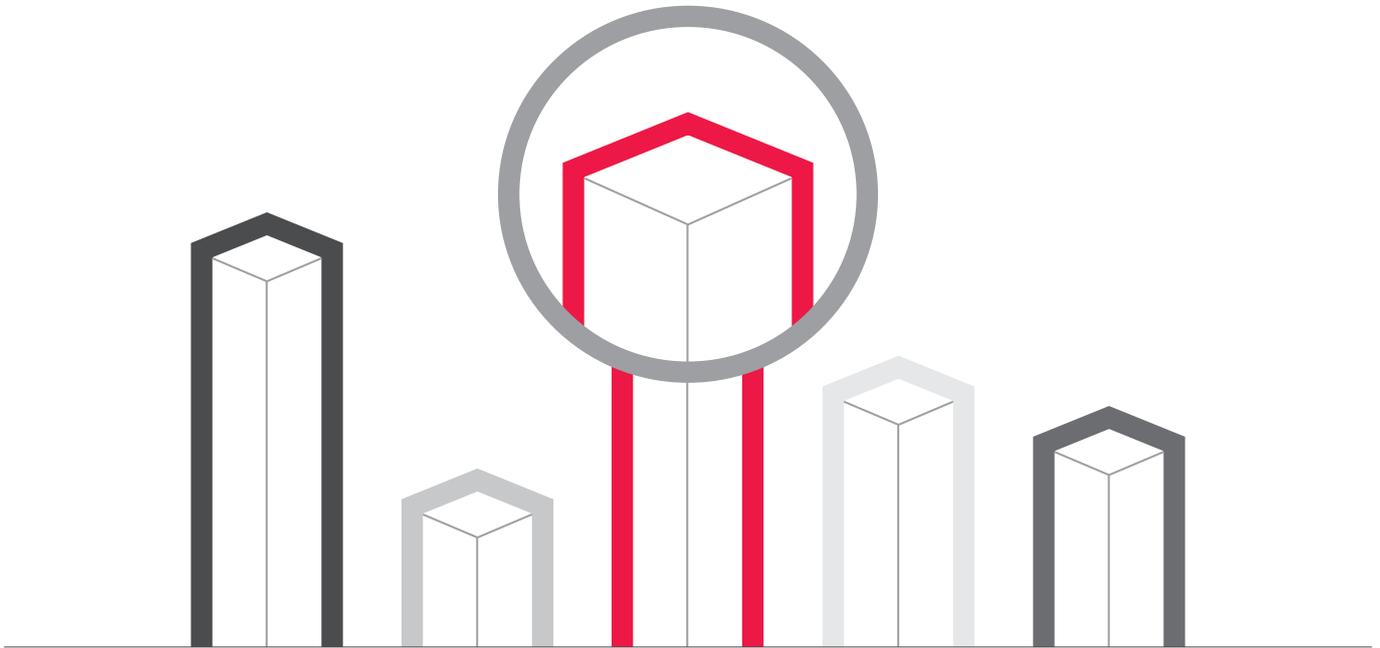

INTRODUCTION

A packaged business intelligence solution that provides valuable insights into your Primavera P6 Enterprise Project Portfolio Management projects and portfolios. P6 Analytics helps you uncover trends and identify issues, helping you to make better and informed decisions.

ORACLE®
PRIMAVERA

OVERVIEW

▸ Access to pre-built analytics and dashboards based on Oracle Primavera's PPM best practices

▸ Customised reports and portals that you can tailor to your specific business needs

▸ Includes Oracle's Primavera P6 Reporting Database, supporting your data warehouse requirements

▸ The Oracle Business Intelligence (BI) platform provides mobile support and geospatial visualisation

▸ Pre-configured industry samples include typical use cases in asset-intensive industries

▸ Analyse early-warning indicators for project and portfolio problem areas

▸ Manage resource efficiencies across your entire enterprise

▸ Analyse project performance trends and predict future results

▸ Manage off-line maintenance projects using daily burn downs and performance metrics

▸ Track routine/on-line maintenance projects using KPIs based on INPO AP928 standards

FEATURES & BENEFITS

▶ **Industry 'Best-Practice' Analytics**
Oracle has collected years of best-practice metrics, KPI's report and scorecards from project, program and portfolio managers. By implementing Primavera P6 Analytics you can reap the rewards of proven methods of enhanced resource analysis, variance analysis, earned value management, and cost and schedule performance.

▶ **Customise reports to suit your business**
Add your own reports, scorecards and KPIs to enhance the pre-configured set of dashboards that you receive. You will have full control to modify default dashboards and build your own custom reports.

▶ **Root-Cause Analysis**
You will find powerful drill-down capabilities, letting you move from a high level portfolio view to specific projects to help you uncover causes of negative project performance. On establishing the problem you can drill directly into Primavera P6 Enterprise Project Portfolio Management from the Analytics Dashboard to take corrective action.

▶ **Manage outperforming and underperforming projects**
Quickly identify projects that are outperforming expectations and those that are negatively impacting portfolios, budgets and staffing issues. Focusing on problem areas lets you direct proper management attention to projects that are not strategically aligned or performing properly.

▶ **Transparency of project performance**
Primavera P6 Analytics gives you a single BI solution and you can combine your project data from P6 with your ERP systems, financial data or customer data to create a single view of the truth across the enterprise. This increased level of transparency gives you the information you need to maximise efficiencies and return on investment.

▶ **Actionable business intelligence**
Early warning indicators, trends and forecasts alert you to problem areas and give you the opportunity to take necessary corrective action to keep your projects running on track.
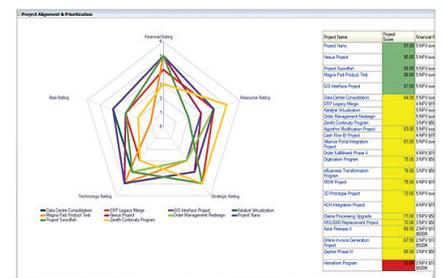

▶ **Easy to use interface**
Built on a familiar web based portal, Primavera P6 Analytics is quick to learn, easy to access and navigate requiring very little training.

▶ **Security and performance**
Business intelligence is built on top of the Primavera P6 Enterprise Project Portfolio Management so you can easily report from dashboards and run ad-hoc queries without sacrificing performance and security.

– Primavera P6 Enterprise Project Portfolio Management detailed project portfolio security is utilised throughout the solution so that non-privileged users do not have visibility into sensitive or confidential information.

– Dashboard reports and ad-hoc queries can run against active projects as well as your entire enterprise history of projects without negatively affecting performance on your live systems. The Oracle BI engine performs offline aggregations and summaries of large complex data sets for fast query responses.
