

INTRODUCTION

The Oracle Primavera suite of applications is the market leader, widely used and in very strong demand from owners and supply chain alike. Cloud Primavera now delivers tremendous flexibility, rapid deployment, location independence and greatly reduced total cost of ownership. New and existing customers will see immediate value in adopting the Oracle SaaS model for their deployment.

OVERVIEW

Project management and execution departments were amongst the earliest adopters of IT software, and such systems have been used since the very first business computers became available. This meant that organisations realised the benefits of automating project control quickly, and as a result continually strive to have the best software and the best delivery solutions for that software. Naturally Oracle Primavera has been the focus of such organisations for a very long time.

Many prospective and existing users of Oracle Primavera are keen to improve the process of deploying the systems. Modern users demand a high degree of flexibility in terms of accessing the applications, finance departments are keen to contain costs and accurately forecast expenditure, and IT departments find it increasingly difficult to keep pace with developments and improvements in an organisation's software requirements.

Oracle's Primavera Cloud Service is built for fast deployment. With minimal cost and low risk, organizations can have speedy access to modern software functionality. Primavera Cloud Service is a complete, integrated project execution solution that provides the transparency and visibility critical for optimized project management, from contract to completion.

- ▶ Unifier Facilities and Real Estate Management
- ▶ Prime Project and Programme Management
- ▶ Prime Capital Plan Management
- ▶ Instantis Enterprise Track
- ▶ Instantis Enterprise Track Timesheets
- ▶ Primavera Analytics
- ▶ AutoVue 2D
- ▶ Gateway

FEATURES & BENEFITS

Ramp Up Quickly

With no hardware to buy or install and minimal internal IT resource required, total cost of ownership is reduced and customers get up and running fast, on best-of-breed modern infrastructure. There is no network or server-level admin involvement needed to manage operations. Oracle performs the application and infrastructure upgrades so that you stay current with the latest versions of the software, with no additional upgrade costs.

There's no need to coordinate software upgrades between vendors, integrate data, or manage disparate security policies. Primavera Cloud Service has been architected on an open, service-oriented platform and infrastructure to simplify integration needs and lower the total cost of ownership.

Instead of relying on the project delivery methods of the past, you can compete more effectively with a complete project management system that provides unified execution, visibility, and control.

Implement Best Practices

The solution delivers the tools for business transformation, with industry best practices that optimize project management. Consistent, repeatable workflows and standardized business processes enable firms to streamline tasks and ensure accountability throughout the organization.

Mobile technology has changed the way project teams communicate. Primavera Cloud Service incorporates the latest social and mobile capabilities, enabling organizations to discover new ways to collaborate and share information within the enterprise and outside with customers, contractors, and vendors.

Stay Agile to Meet Market Demands

The solution easily handles future business growth. When new opportunities arise or the marketplace changes, organizations have the flexibility and power to react quickly. New services, customers, and collaborative partners can be brought on board—even to remote construction sites—with no additional burden to IT staff.

Oracle Primavera Cloud Service is hosted in Oracle's data centres and adheres to the strictest standards for physical location and systems security.

All the Support You Need

Naturally Oracle Primavera Cloud has full technical support from Oracle. You can choose to augment that with Application Support from Milestone, which can be tailored to provide speedy response to queries through to acting as a virtual contact desk for dealing with the Oracle Support Group on our customer's behalf.
