Oracle's Primavera Gateway

Milestone
Project Management Solutions

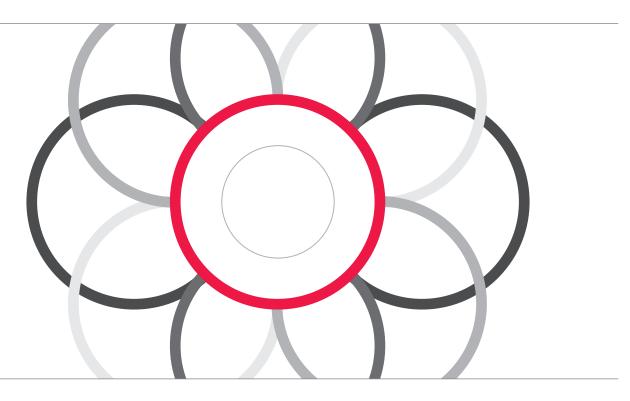

INTRODUCTION

Aligning back office budgets, actual costs, assets, labour and materials resources with project operations helps to ensure accurate forecasting of costs, resources and schedules. Primavera Gateway integrates your business processes and eliminates the need for duplicate data entry to support overall project success.

ORACLE®
PRIMAVERA

OVERVIEW

- Application agnostic integration capability for Primavera applications

- Standard Java application with no requirement for third party middleware

- Extensible integration solution with configurable and customisable options for all business applications

- Scalable and designed to support high-performance data exchange

- Gives transparency to enterprise-wide project, portfolio and resource management

- Reduces total cost of ownership

- User friendly with configurable and custom data synchronisation

- Offers technical support in 27 different languages

- Supports data consistency between different applications

- Improves internal and external collaboration on projects

- Offers reliable reporting of set project parameters across different applications

FEATURES & BENEFITS

▸ **Increased transparency to help maximise profitability**
Project-driven and asset-intensive organisations have to keep a tight rein on cost, schedules, materials and resources. Primavera Gateway gives you an accurate and real-time picture of performance across all projects, programs and portfolios over their lifecycle.

▸ **Get the complete picture**
Align costs and schedules in user-friendly applications that integrate with Oracle Primavera project portfolio management applications as well as third party systems, enterprise resource planning and asset management solutions.

▸ **Scalable to all sizes of project, program and portfolio**
Primavera Gateway enables the interoperability needed between Oracle Primavera and third party applications so that resource requirements can be planned and managed for all types of projects or maintenance work.

▸ **Easy to deploy and configure**
Deployable on Weblogic Server, Primavera Gateway doesn't require expensive middleware, but is straightforward to install and configure for an organisations integration process.

▸ **Streamline business processes**
Using a standard Java technology, Gateway swiftly and reliably integrates data from any external application such as project costing, asset maintenance, materials management and human resources modules with ERP and EAM solutions. This means businesses can use legacy systems while using Primavera software to manage projects, portfolios and resources across the enterprise more easily.

▸ **Manual and automatic data synchronisation**
Web enabled user interface allows secure access to key functional areas of integration such as synchronisation, template management, administration and execution of data exchange between Primavera EPPM and the third party application.

▸ **Key integration synchronisation capabilities**
– Execution of data synchronisations
– Monitoring and data logging
– In-built Scheduler

▸ **Primavera Gateway architecture overview**
– Standard Java Web application
– Pre-build integration providers for Primavera
– Pluggable providers for external applications
– Seeded data maps and flows to support industry best practices
